food...**

Mission

We propose and implement solutions of effective animal nutrition.

Vision

To play a key role on the farms, the basis of the food chain and thus influence the quality, assortment and security of the foodstuffs not only in the Central European region.

Values

- ▶ Teamwork
- ▶ Strong commitment to reach corporate goals
- ▶ Comprehensive advice and customer service
- ▶ Maximum quality of the products and service
- ▶ Continuous education and the development of own know-how
- ▶ Fair-play competition and respect for competitors
- ▶ Flexible introduction of scientific findings into practice

Traditional Czech producer

History

Beginning of production of mineral feed supplements started in November 1970. The authors of the first formulas were renowned professors and scientists, who have strongly influenced Czech animal nutrition. The beginning of production was linked with milk replacer named MIX milk, later on, the production of mineral supplements and premixes was added.

The independent entity was established in 1989 and the current limited company was formed by the owners in 2000 year. Nowadays, VVS offers the complex nutrition for all farm animal categories, especially for dairy cattle. VVS has built experienced team of consultants, who consult, next to animal nutrition, also farm economics and management.

VVS established a computerized production process in 1995. Five years later, an overall reconstruction and innovation of production lines occurred. However, as innovation is never-ending process, VVS has continued in its technological improvement to be always a step ahead. The investment into quality technology resulted in obtaining ISO 9001, certified in 2000 year and implementation of HACCP system in 2005 year, with certification in 2009 year.

In 2008, VVS production technology was upgraded again. Current technology enables VVS production of mineral-vitamin feeds with added value – non-dusty and flavored agglomerated feeds. Last reconstruction was co-financed with EU funds – Program of rural development.

The October 1st of 2012 year became another milestone in the most modern management era of VVS production and warehouses, when Microsoft Dynamics NAV Classic ERP system and RFID technology were implemented. Since November 2013 year, VVS Verměřovice has been keeping GMP+ B1 certification for „Manufacture of mineral feeds, complementary feeds and premixes for animals and trade with feed materials and additives.“

▼ We become the nr. one, „A“ on the Czech market and remarkable partner on the foreign markets for services in nutrition counseling and supplies of vitamin-mineral feeds on dairy farms.

▼ By the profitable economy and with the sufficient financial liquidity we will provide financial funds for the further investing and development of the company.

▼ Continuously we will raise the level of current QMS to maximally eliminate human factor error and to avoid disagreements before they occur with the support of MS Dynamics NAV Classic, datamatrix codes, RFID chips and using modern management methods, for example Poka-Yoke.

Strategy of the company

▼
With the investment into modern elements of the production equipment we will increase the quality of our products and we will improve working environment for employees in the production site.

▼
We will improve implemented information system with the target to maximally utilize its tools and to improve quality and speed of services to our clients.

▼
We will create the system of continuous education of our employees that will increase their qualification.

Quality and safety without compromises...

Purchases of raw materials for vitamin-mineral feeds and premixes

VVS pays a great attention to the purchasing of quality feed raw materials. The importance of quality is emphasized in our goal to provide each VVS customer with the products, that are stable both physically and chemically and consistent in their composition. These attributes are influenced by raw materials selection and VVS production technology.

All VVS suppliers are examined by compliance with GMP+ certifications either as producer or supplier. All suppliers are requested to supply non-dusty raw materials and deliver accurate specifications and samples for analysis in our reference laboratories to verify the composition. As soon as everything is checked up and the supplier becomes VVS approved supplier, business and delivery conditions are being discussed.

Since a great emphasis is put on VVS product quality consistence, the portfolio of suppliers and their raw materials are changing very little. VVS has a long-term business relationship with all key suppliers and work so to be their good and reliable partner.

Checking the valid GMP+ certification of the supplier.

Checking the supplier's product portfolio, product specifications and analysis.

Putting the supplier on the VVS list of approved suppliers.

Contracting the supplier under the specific conditions of VVS.

Operational orders of the raw materials by the production and sales requirements.

Entry deliverycheck of all raw materials/ ingredients when delivered to VVS warehouse.

Traceability management

To comply with traceability rules summarized in the Regulation (EC) Nr. 1831/2003, VVS Verměřovice s.r.o. has created its own unique system based on data matrix codes application.

1. List of approved VVS suppliers, GMP+ certified.
2. Labeling of all purchased raw materials and additives with own data matrix codes.
3. Accurate positioning of the raw materials and additives in the warehouse.
4. Preparation of the dosages of raw materials and additives by the production directives with data matrix.
5. Matching the dosages of raw materials and additives with RFID chips.
6. Identification of workers with their personal chips at any particular working place.
7. Fill the dosages of raw materials and ingredients into production process using RFID chips and scanners.
8. Accurate automatic evidence of all movements of raw materials and ingredients.
9. Manufacturing of packed product labeled by complete label with the standard description and data matrix code.
10. Putting the final products in the warehouse for dispatch.
11. Dispatching by issued loading list in the system using scanning of particular codes.
